Abstract

- The College Planning and Event Management System is a web-based application developed to simplify the process of organizing and managing college events. In many colleges, event planning is done manually using registers, WhatsApp messages, and notice boards, which often leads to confusion, data loss, poor coordination, and delays. Managing event registrations, schedules, budgets, and participant details becomes difficult for both students and faculty.
- This project aims to provide a centralized digital platform where all event-related activities can be managed efficiently. The system allows event organizers to create events, plan schedules, assign tasks, manage budgets, and track participant registrations. Students can easily view upcoming events, register online, and receive updates related to events. Faculty or administrators can monitor events, approve requests, and generate reports.
- The proposed system reduces paperwork, saves time, improves communication, and ensures better transparency in event management. By using modern web technologies, the system offers a user-friendly interface, secure data handling, and real-time updates. Overall, this project helps colleges plan and manage events smoothly, accurately, and professionally.

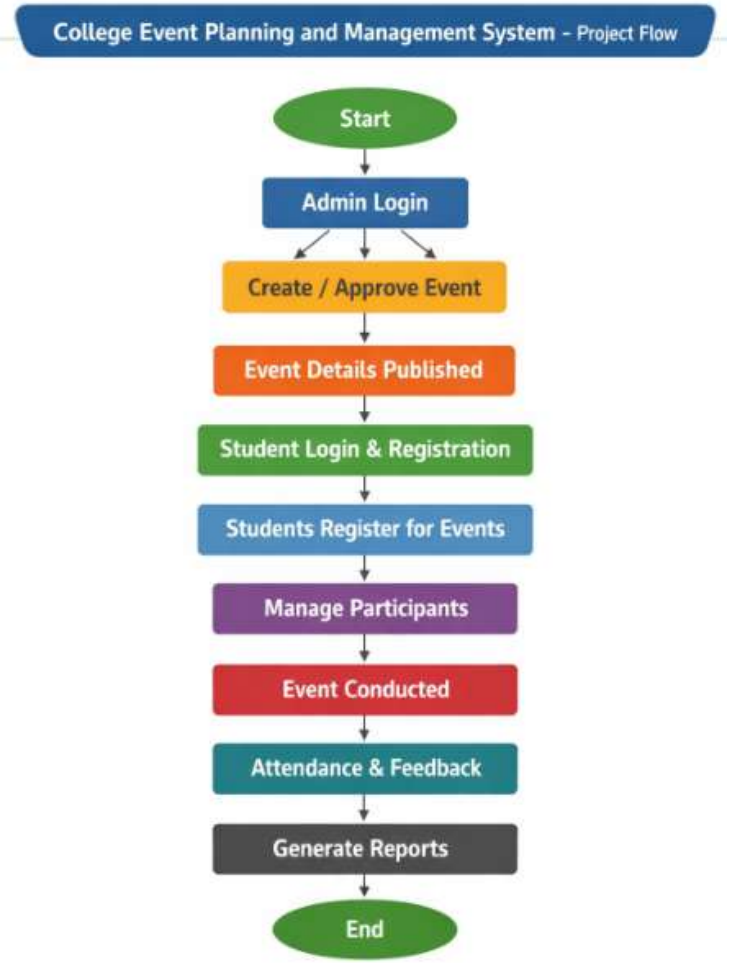
Introduction

The College Event Planning and Management System is a web-based application designed to automate and simplify the process of organizing college events. This system helps students, faculty, and administrators to plan, manage, and monitor events from a single platform. It allows organizers to create events, students to register online, and administrators to approve and supervise events. The system reduces manual work, saves time, avoids errors, and improves coordination among all users. Overall, it makes event management faster, transparent, and more efficient.

Problem Statement

In many colleges, event planning and management is done manually using paper work, WhatsApp messages, Excel sheets, or verbal communication. This leads to problems like confusion in event schedules, difficulty in student registrations, data loss, lack of proper coordination among organizers, and delayed announcements. Managing multiple events at the same time becomes very difficult for faculty and student coordinators. There is no single platform to track event details, participants, venues, budgets, and approvals. Hence, there is a need for a centralized digital system that can efficiently manage college events in a simple and organized way.

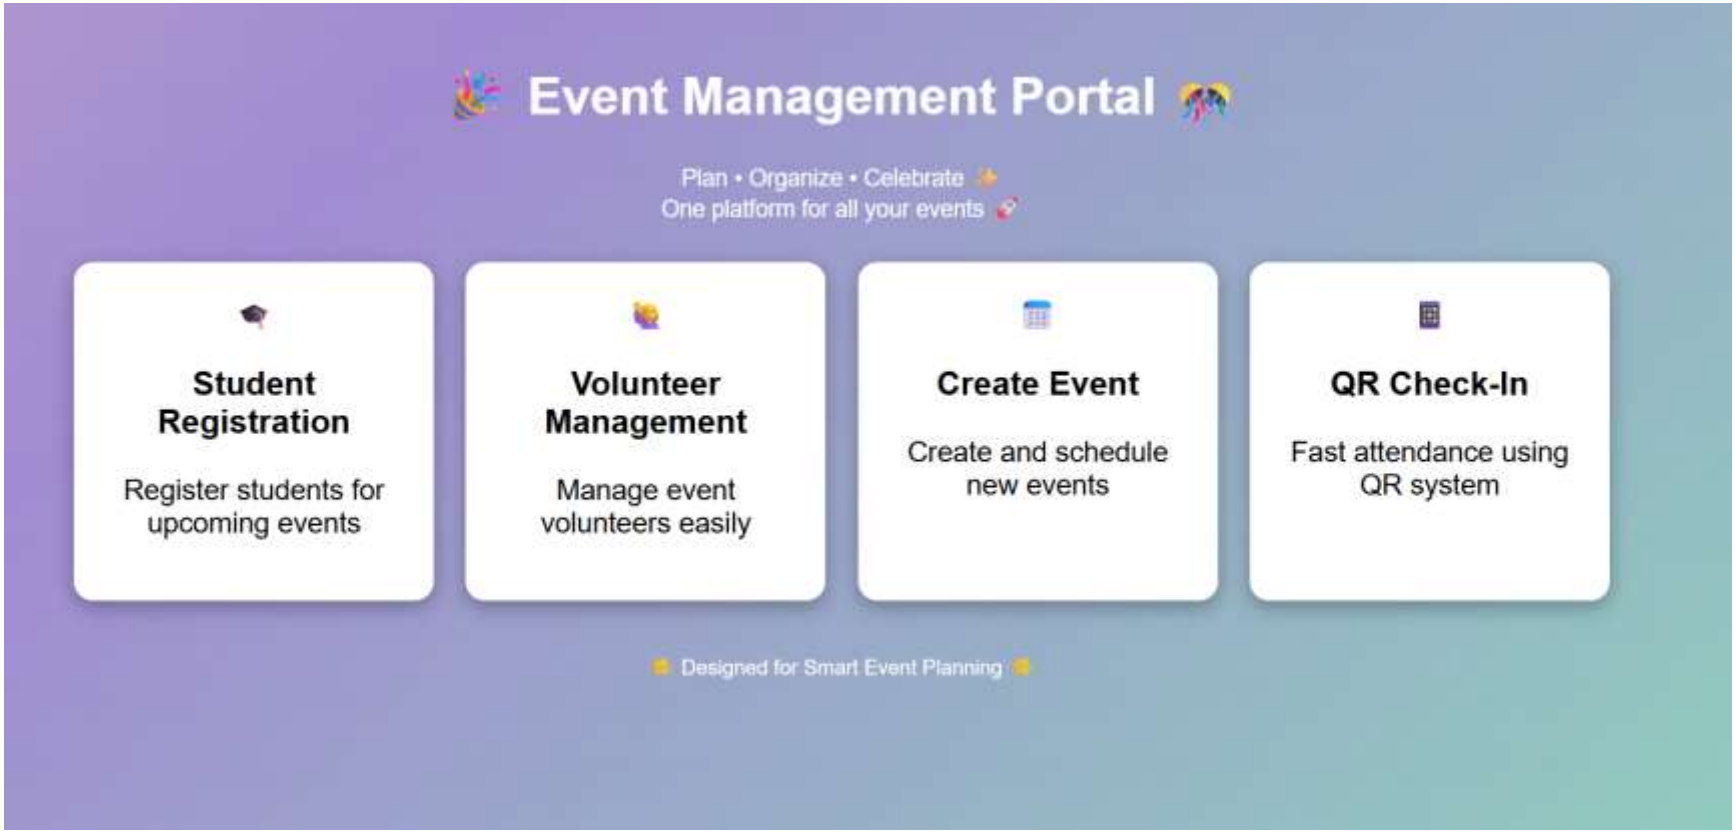
Project Flow Diagram



Objectives with Justification

- To automate the college event planning and management process.
- To provide a centralized platform for managing all college events.
- To enable easy online event creation and approval.
- To allow students to register for events online.
- To improve coordination between admin, faculty, and students.
- To efficiently manage participants and attendance.
- To generate reports and event-related information.
- To reduce paperwork and manual errors in event management.

Modules [Frontend web pages]



Expected Outcomes of the Proposed Work

- Expected Output of the Proposed Work
- A fully functional College Event Planning and Management System.
- An easy-to-use admin dashboard for creating, approving, and managing events.
- A student portal to view event details and register online.
- Proper storage of event data such as schedules, venues, and participant details.
- Efficient participant and attendance management system.
- Automatic generation of event reports and summaries.
- Reduced paperwork and faster event management process.
- Improved coordination and communication between admin, faculty, and students.
- Secure and reliable handling of event-related information.
- Overall improvement in efficiency, transparency, and accuracy of college event management.

Conclusion and Future Scope

- The system can be enhanced by developing a mobile application for Android and iOS users.
- Online payment integration can be added for paid events and registrations.
- The system can include QR code–based attendance for faster and accurate entry tracking.
- Notification and reminder features using email and SMS can be implemented.
- AI-based analytics can be added to analyze event performance and student participation.
- Integration with college ERP systems can improve data sharing and management.
- Multi-college event support can be introduced for inter-college events and fests.
- Cloud deployment can be used to improve scalability and data security.
